Primary School No 6, Września, Poland

Abstract

The pupils, who will be under the care of form tutors in Torun, will make electronic guides or other publications related to the city or its surrounding areas. During their stay they will collect the materials using the mobile devices of various forms, and later they will use them to produce multimedia collections. During the trip the children will have an excursion according to the previously developed plan, during which they will learn about the history, monuments and natural sites of Torun. They will conduct short interviews with residents and tourists, will share their observations by entering them in the form of electronic notes to the appropriate resources. During the workshops, the pupils accompanied by a teacher will make the selection of the collected resources, send the valuable and processed materials to the network resources (iCloud service), and later their group partners will download them and make the composition in the form of an electronic guide, diary, etc. Exported to the tablets ready elaborations will be presented to the participants. The produced elaborations will serve the students of other classes as teaching materials, and they will also help in the work of the school teachers

Keywords

workshops, teaching, mobile technology, K12
